Portfolio	muhammad-haris-khokhar-portfolio.vercel.app	Location	Multan, Pakistan

SUMMARY

Computer Science graduate (2026) in applied analytics. I build studies and services that commit to a decision rule *before* the data arrives — pre-registered thresholds, held-out outcomes, and null results published rather than rewritten. Twelve run live, each taking a question from raw source data through Python, SQL and dbt to a deployed service that grades its own forecasts in public. Seeking a first full-time data analyst role.

SKILLS

Languages	Python, SQL, R, TypeScript
Analysis	pandas, scikit-learn, statistics, regression, causal inference (difference-in-differences), survival analysis, experiment design, forecast evaluation
Data & delivery	dbt, PostgreSQL, DuckDB, FastAPI, GitHub Actions, Tableau, Next.js / React, Vercel

PROJECTS

Everything I build lives on my portfolio — full write-ups of these and every other project, plus more about me, at muhammad-haris-khokhar-portfolio.vercel.app	
Bellwether — self-retraining risk model	bellwether-phi.vercel.app
Scores live Wikipedia edits for revert risk and commits 52,000+ forecasts to an append-only register before outcomes are known, then retrains and replaces itself when its own accuracy decays.	
PostgreSQL · scikit-learn · MLOps	
Sawtooth — pre-registered staffing study	sawtooth-henna.vercel.app
Tested daily nurse-staffing floors against Medicare's quarterly average over 49.2M timecards and 20,543 held-out inspections . Decision rule committed to git before the model ran; result was null ($\Delta\text{AUC} +0.0054$ against a pre-registered 0.03) and published as such, with the mechanism that explains it.	
DuckDB · Python · Next.js	
GridCast — live carbon-intensity forecasting	grid-cast-sigma.vercel.app
Publishes every 48-hour forecast before the outcome exists, then scores four competing models in public against National Grid's own published forecast.	
dbt · scikit-learn · Next.js	
Downfall — censored demand at bike-share docks	downfall-sigma.vercel.app
A station with no bikes records no demand, so the docks that fail most look like the docks nobody wants. Watches all 2,508 New York stations , logs every stockout to an append-only register, and publishes no demand estimate until it is marked against stations whose true demand was never hidden.	
Survival analysis · GitHub Actions · PostgreSQL	
InsightForge — no-code analytics platform	insight-forge-beta.vercel.app
CSV upload to finished analysis: quality checks, statistical tests, a predictive model and a downloadable PDF report, covered by 153 automated tests across both layers.	
Next.js · FastAPI · scikit-learn	
Job Data Analysis — final year project	job-data-analysis.vercel.app
Scraped and parsed 15,000+ job listings into salary and demand benchmarks, presented in a live web app.	
Python · data analysis · Vercel	

EDUCATION

BS Computer Science — Bahauddin Zakariya University, Multan	2022 – 2026
FSc Pre-Engineering — KIPS College, Multan	2020 – 2022
